MEAL JOURNAL / WEB + ANDROID

Fuel

Capture a meal, review its nutrition estimate and correct serving sizes before you save it.

QUICK START

Open: https://fuel-journal.vercel.app

Run locally:

```
cd web
npm ci
npm run dev
```

Next: Set .env.local and Supabase migrations first; open http://localhost:3000

YOUR FIRST SESSION

01 Open the hosted app or install Android 2.0.0 from the APK link in README. Create or sign in to your account.

02 Start a meal entry. Type foods or use photo analysis. On Android, use the camera or photo picker.

03 Review each food and portion. Estimates are approximate; edit serving sizes and nutrition fields or enter package-label values.

04 Save the meal and review daily totals or meal history. Add goals, recipes or weight records from their sections.

05 On Android, barcode lookup uses Open Food Facts. Use export or share controls for a CSV or JSON copy.

DATA AND PRIVACY

Meal photos and descriptions are sent to the configured analysis provider. Saved account data and photos use Supabase. Read the privacy page before sharing personal information.

LIMITS TO KEEP IN MIND

Nutrition estimates need review. Native barcode, reminders and sharing need physical-device verification. Internet is needed for account, analysis and cloud operations.
